MFP Remote™

MFP Remote V 1.0

The possibilities to control a HP printer fleet are already very good, thanks to WebJetAdmin. But one thing was missing to assist help desk personnel: There was no software that allows to directly access and control the front panel of the devices.

What MFP Remote can do for you:

MFP Remote is that missing piece of control. It can be integrated directly with WebJetAdmin to allow direct access to the panel. But also installed without WebJetAdmin, MFP Remote allows you to organise your devices into groups, and directly control functions such as panel lock/unlock, call the embedded WebServer of the device, and reset or reboot the device.

Beside that MFP Remote also allows you to make panel screenshots to a file, or to even record a picture sequence. This can be very helpful, if you want to make some documentation.

Requirements

MFP Remote usually will be installed on the PC of the Helpdesk or Support Personnel. Possible operating systems are Windows XP, Vista, Windows 7, Server 2003 and 2008 in both 32 and 64 Bit Versions. DotNet 3.5 is a pre-Requirement for the Application. The Program of course needs to have access to the Devices you want to control. For this Reason, the following Ports must be allowed: 80(http), 443(https), 161(snmp), 53(dns) and ICMP Ping.

Supported devices:

- B/W Printer : P3005,4100,4200,4250,4300,4350,Pxxx,5200,9050
- Color Printer: 3700,CP3505,CP3525,4700,CP6015
- B/W MFP : M3035,4345,M4345,M5025,M5035,9000mfp,M90x0
- Color-MFP : CM3530,4730,CM4730,CM6040,9500mfp

.. and more. please feel free to download and install the Trial Version and try the program in your environment!

More technical information, product videos, and the Trial Version can be found at:

Key Advantages:

- Devices can be organised in Groups
- Device Frontpanel can be locked/unlocked by Mouse click
- Direct Access to the Device Webserver (EWS) by one Mouse click
- Reboot of a Device by Mouse click
